Introduction

beamer-laughlin is a LaTeX Beamer theme inspired by the Laughlin Fedora 14 theme[1] and the Anaconda GUI layout[2].

Comments, suggestions or bug reports ?

Please send a mail at: `melmorability@fedoraproject.org`

◀• Back   •▶ Forward

Download

Where to get it?

The theme is available as a `.zip` archive file at
`http://melmorabity.fedorapeople.org/latex/`.

This package needs two 2 dependencies:

- the `comfortaa` package
- the `cantarell` package

available at the same page

Installation

Once the archive downloaded and extracted, copy `texmf` stuff:

Windows in `C:\texmf\` with MikTEX or TEXLive

Unix with TEXLive:

- in `~/texmf`, for a single user
- in `/usr/local/share/texmf/`, for all users

Don't forget to update your ls-R database!

MikTEX launch the MikTEX options toolbox

TEXLive launch `texhash` (as root if the theme was installed for all users)

How to use it?

Just call the theme using \usetheme{Laughlin} in your preamble

A sample LATEX preamble

```
\documentclass{beamer}

\usepackage[american]{babel}
\usepackage[T1]{fontenc}
\usepackage[utf8]{inputenc}

\usetheme{Laughlin}
```

Back   Forward

How to use it?

Options

language=⟨*language*⟩ to change the labels language in the buttons of the progress bar.
Available languages are english, french, german, italian, portuguese, spanish.

Example

```
% Labels in French
\usetheme[language=french]{Laughlin}
```

How to use it?

Some tricks…

Alternating table row colors

Release	Name	Release	Name
Fedora 14	Laughlin	Fedora Core 7	Moonshine
Fedora 13	Goddard	Fedora Core 6	Zod
Fedora 12	Constantine	Fedora Core 5	Bordeaux
Fedora 11	Leonidas	Fedora Core 4	Stentz
Fedora 10	Cambridge	Fedora Core 3	Heidelberg
Fedora 9	Sulphur	Fedora Core 2	Tettnang
Fedora 8	Werewolf	Fedora Core 1	Yarrow

How to use it?

Some tricks…

Alternating table row colors

1. Add the [xcolor=table] option to \documentclass{beamer}
2. Add the following line to your preamble:

   \rowcolors{1}{laughlinblue!50}%
     {laughlinblue!30}

How to use it?

Some tricks...

Syntaxic coloration in `lstlisting` environments

```c
#include <stdlib.h>
#include <stdio.h>

/* A comment */
int main (int argc, char* argv [])
{
  printf ("Hello world!");

  return EXIT_SUCCESS;
}
```

How to use it?

Some tricks...

Syntaxic coloration in `lstlisting` environments

Add the following lines to your preamble:

```
\lstset{%
  basicstyle=\ttfamily,%
  keywordstyle=\color{laughlinblue}%
  \bfseries,%
  commentstyle=\color{laughlinblue!75}%
  \itshape,%
  columns=flexible%
}
```
